

SoundGuard®

FURUKAWA - HighEnd-Cable programme

Name :

Crazioso

Kategorie:

**75 Ohm Digital Audio & Video Cable
PCOCC μ - conductor**

- μ -conductor in both the central and outer conductors
- Insulating of high density polyethylene and foamed polyethylene, minimising transmission loss, jacket of flexible PVC
- fitted with **24K gold plated PCOCC Cinch Plugs or Neutrik Profi Cinch Plugs**
- For digital and video connections
- Length from 80 cm, every other length on request.

μ Series Description :

The μ cable is a step beyond Furukawa's pace setting PCOCC (Pure Copper by Ohno Continuous Casting), pursuing a new level of clarity. The μ cable draws out the low region, balancing it to fullest extent with the high region. Therefore, the music is captured softly, creating the sensation that you're listening to the music live. Select your favourite vocal piece and compare the μ cable to the cable you've been using. The result will amaze you!!

The highest quality with the newest materials

Years of cable research has helped Furukawa develop the new μ Series, a high efficiency cable with minimal loss. We begin with continuous cast PCOCC, which contains an absolute minimum of impurities in the grain boundary. By heating and re-cooling the PCOCC under special conditions, the PCOCC is re-crystallised, while its structure is maintained. Due to the physical stabilisation of these pure materials under stress-free conditions, we have achieved a superior audio quality and an exceptional linearity through the audio frequency band, due to the improvement of the conductive property. Furukawa Electric's planning and technological know-how has actualised large scale, true-to-life reproductions with a high-quality product.
